

TOTAL COST OF OWNERSHIP · BIOGAS PLANTS

Why OPEX beats CAPEX

CUMULATIVE PROFIT OVER THE PLANT'S LIFETIME · ILLUSTRATIVE

If you build cheap, **you build twice**

Cheap equipment saves money on day one. **Then wear, repairs and standstills eat the profit year after year.**

Why quality key equipment **pays off**

Lower OPEX

Less wear, less maintenance, fewer repairs. Every year of operation.

Fewer standstills

Zero production is the most expensive time in any biogas plant. It happens more often than investors know.

Committed operators

Daily breakdowns frustrate your team. The best operators leave, the poor ones stay.

THE BOTTOM LINE

A higher CAPEX for key equipment **pays back twice and more.**
